

Discover the benefits of SledStart remote engine starter!

This breakthrough snowmobile accessory features a programmable temperature auto start allows the user to select a specific temperature in Celsius or Fahrenheit to activate the remote start. The SledStart remote start system continuously monitors battery and informs user if the battery is too weak to start! The timer start allows user to select 1, 2, or 3 hour increments for up to 24 hours. Short run Turbo mode with 3 selectable times for cool down. Exhaust cloud informs user if snowmobile is running. AAA battery icon that indicates the battery strength of the LCD remote.

The SledStart snowmobile 2 way remote start system allows you to remotely start your sled safely and quickly from the warm comfort of your bed! The SledStart remote starter system continuously monitors battery and informs user if the battery is too weak to start! If you can only buy one accessory for your snowmobile this year, this is it!
